

## 5f. Important Considerations

- Needing to look at practice capacity/ practice size – consider ratio vs counts
- Did any carriers submit the network adequacy declaration where questions 1-4 weren't compliant?
- Methodology for data collection is important sites, buildings, or providers; if it is inadequate then it is; clearer data definitions
- We don't want to get into weeds; but sometimes they are important – a few details (as in Storey) might be helpful (Primary designations)
- Population size by county (Jeremy pulled)
- Learn more if telehealth can stand in as part of network adequacy. The service as described in law – must be available but not across board
- Process if carrier does not meet geographic adequacy
- Where there are not adequate providers in a county, to what degree are natural migration patterns considered?
- Is it in our purview to look at service availability
- We have to offer a product if individual wants it – we are stuck if we have a product we have to sell it
