

There needs to be affordable medicine for Chronic conditions. Example:  
Asthma. Prescription prices  
for Asthma medication are usually between \$200 - \$300 dollars per month.  
State employees are  
required to pay full price for medication until they reach their high  
deductible. Many people cannot  
afford to pay for their medication due to the high price so they either  
go without or do ½ doses to save  
on costs. This results in Asthma attacks where the person usually ends up  
in the ER. We need some  
kind of prescription coverage.
