EARTHQUAKE INSURANCE

NEVADA? EARTHQUAKE COUNTRY?

After Alaska and California, Nevada ranks third in the country for major earthquakes – those of magnitude 5.0 or higher. As the following National Seismic Hazard Map¹ from the United States Geological Survey (USGS) shows, earthquake hazard can exist in almost every state. However, Nevada has some of the highest hazard levels.

This makes Nevada one of the most active states for seismological activity.

2008 United States National Seismic Hazard Map

The following maps display various faults that exist in Nevada. The first map² shows the slip rates of the faults in Nevada, while the second map³ presents a comparison of active faults in Nevada and California.

² Source: Nevada Seismological Laboratory at the University of Nevada in Reno

Historical experience and seismic analyses strongly suggest that no area of Nevada is completely safe from earthquakes. USGS estimates⁴ based upon 2009 data show that within the next 50 years the probability of a 5.0 or higher magnitude earthquake occurring within close vicinity of Las Vegas is 15 to 40 percent. For Reno/Sparks/Lake Tahoe and Carson City, this probability is 90-100 percent. This probability decreases as the magnitude of the earthquake is increased.

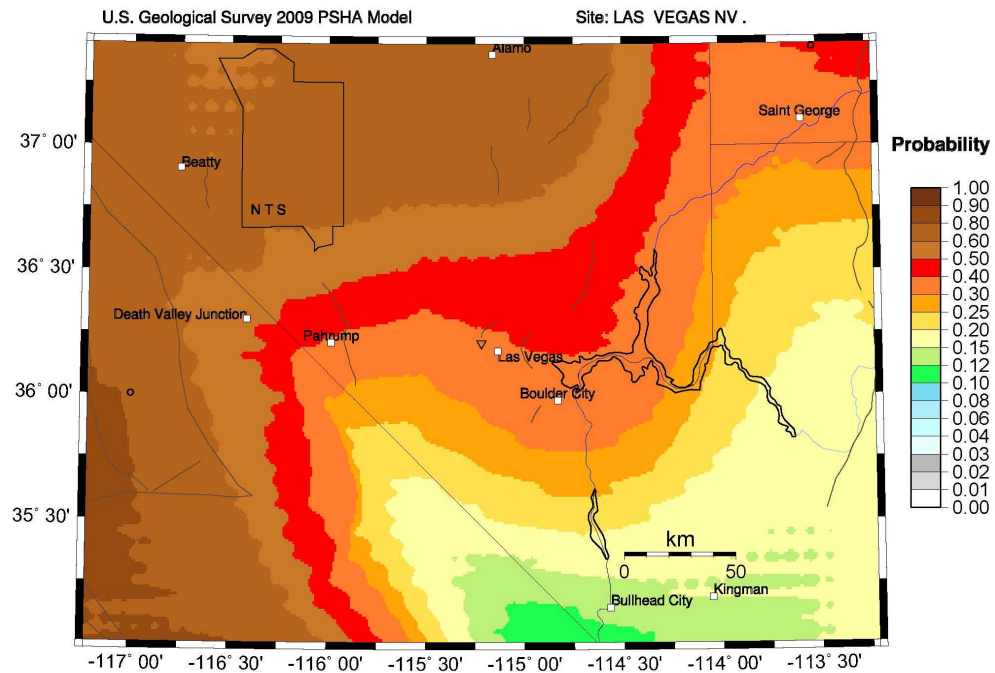

Still, it is important to remember that probabilities are not certainties, and the next earthquake in Nevada may strike in any place at any time. Wells, which was given a nine percent probability of a major earthquake occurring within the next 50 years, experienced a magnitude-6.3 earthquake in 2008.

In other words, it is essential for all Nevadans to be adequately prepared for a seismic event. The University of Nevada Seismological Laboratory provides resources dedicated to assisting people prepare for an earthquake at <http://www.seismo.unr.edu/Preparedness>. You can also find out information about the latest earthquake activity in Nevada at: <http://www.seismo.unr.edu/Earthquake>.

⁴ Earthquake risk probability data obtained from United States Geological Survey. The USGS 2009 maps of earthquake probabilities are provided on page 4 of this guide.

Probability of earthquake with $M > 5.0$ within 50 years & 50 km

Probability of earthquake with $M > 5.0$ within 50 years & 50 km

WHY BUY EARTHQUAKE INSURANCE

Most commercial and home policies – including condominium, manufactured home, dwelling, and renters’ policies – **do not** cover damages resulting from earthquakes and earth movement. However, several insurers in Nevada offer earthquake coverage as a special endorsement to an underlying policy at the request of the policyholder. The decision to obtain earthquake insurance for one’s property is an individual one and should be based on your understanding and tolerance of the risks associated with not having earthquake coverage.

Earthquakes are an ever-present risk throughout Nevada, and the Division of Insurance encourages Nevadans to consider purchasing earthquake protection.

WHEN TO BUY EARTHQUAKE INSURANCE

Purchasing earthquake insurance before an earthquake happens is the best way to ensure that your structure and contents are adequately protected.

If a major earthquake results in significant losses, most insurance companies will declare a moratorium on issuing new earthquake insurance in the market affected by the seismic event. Typically, the duration of the moratorium is anywhere from 30 to 60 days. Such a moratorium often is lifted once the likelihood of damaging aftershocks has diminished.

WHAT WILL EARTHQUAKE INSURANCE COVER?

Most earthquake insurance policies define an earthquake as “shaking or trembling of the earth, caused by volcanic activity, tectonic processes or any other cause.” Typically, an earthquake insurance policy or endorsement provides coverage for any earthquake-related damages to the dwelling or personal property under this definition. Some policies also provide coverage for events directly related to earth movement and seismic shocks – such as landslide, settlement, mudflow, and the rising, sinking and contracting of earth if the damage is undeniably attributable to an earthquake. Most earthquake insurance policies treat earthquakes occurring within one 72-hour period as a single seismic event.

An earthquake policy or endorsement will help pay for repairs to your home or business if it is destroyed. Check your home or commercial insurance policy to see if damages caused by earthquake or earth movement are covered or excluded. This information is found in your policy, generally located in sections titled “Losses Insured” and “Losses Not Insured.” If such damages are excluded, contact your insurance agent or company and ask about how to obtain earthquake coverage.

WHAT WILL EARTHQUAKE INSURANCE NOT COVER?

What your earthquake insurance doesn't cover (the exclusions) varies by insurance company. Review your earthquake coverage and declarations page to learn what the exclusions are.

Some of the most common exclusions in earthquake insurance are:

- ✚ **Fire.** Earthquake insurance usually won't cover anything your home insurance policy already covers. It won't, for instance, cover fire damage to your home – even if the fire started because an earthquake ruptured a gas line. Your home insurance policy would cover losses from a fire.
- ✚ **Land.** Typically, earthquake insurance doesn't cover damage to your land, such as sinkholes from erosion or other hidden openings under your land. Earthquake insurance wouldn't pay to fill in large cracks or holes that appear in the middle of your yard after an earthquake. If your insurance includes Engineering Costs coverage, it will pay at least part of the cost to stabilize the land that supports your home.
- ✚ **Vehicles.** Earthquake insurance does not cover damage to your vehicles even if an earthquake damages vehicles in your garage. Your automobile insurance policy may cover that damage. The Comprehensive Coverage provision of your automobile policy, also listed as the "Other than Collision" provision in some contracts of insurance, generally provides coverage for damage to vehicles caused by earthquakes, subject to any applicable deductible.
- ✚ **Pre-Existing Damage.** Earthquake insurance won't cover damage to your home if that damage was there before the earthquake.
- ✚ **External Water Damage.** Earthquake insurance doesn't cover water damage from external sources – such as from sewer or drain backup or flood. For example, if you live near a lake that floods your home after an earthquake, earthquake insurance *won't* pay to repair the damage. A flood insurance policy *will* cover your property for that damage.

What is a declarations page?

The declarations page is a summary that's usually attached to the front of a policy. Your insurer mails you one each time you renew your policy. It states your name, address, policy number, categories of coverage, coverage limits, endorsement(s), and your lender. You need to have the most up-to-date copy to know exactly what your coverages are.

✚ **Masonry (Brick) Veneer.** Some earthquake insurance doesn't cover masonry veneer – the brick, rock, or stone that covers your home's exterior instead of stucco or siding. If masonry veneer isn't covered, the insurer usually deducts its value from the total cost of your loss before applying the deductible. That means the cost to repair a home damaged in an earthquake would be based on using siding materials that cost less than masonry veneer. If you have any masonry veneer on your home, ask your insurance agent or company if it would be covered.

HOW MUCH COVERAGE DO I NEED?

How much coverage is right for you will depend on your situation. Insurance policies have "limits of coverage" that tell you the largest dollar amount covered for different types of losses. Insuring your home for its *appraisal or loan value* likely means you'll only have enough coverage to repay your lender. It may not be enough to repair or rebuild your home, especially if it's a total loss. Usually, the dwelling coverage limit will be the same on your home insurance policy and your earthquake insurance. If you don't have enough home insurance coverage, you probably won't have enough earthquake insurance either. You should review your dwelling coverage from time to time to be sure it doesn't drop below the cost to replace your home. If it drops below 80% of the full replacement cost of your home, your insurance company may reduce the amount that it will pay on a claim.

The following are questions that may help you decide how much coverage you need:

For dwelling coverage to repair or rebuild your house:

How much would it cost to repair or rebuild your home? How much of that cost could you personally pay?

For contents coverage:

How much would it cost to replace your household items (such as furniture, appliances, electronics, and clothing)? Could you afford it? Ask what you need to do to be sure the insurance will cover all of your personal property, especially valuable or breakable items such as artwork or porcelain.

For additional living expense coverage:

How much would it cost to find a temporary place to live because you couldn't live in your home after an earthquake? You could be out of your house for many months if there's major damage to your home. This coverage pays the extra costs you have to pay because you aren't able to live in your home. For example, it would pay rent for temporary housing while you continue to pay your home mortgage. This coverage does not pay your regular costs of living such as your groceries or your car payment.

HOW MUCH WILL EARTHQUAKE INSURANCE COST?

Premiums for earthquake insurance vary by your home's characteristics and the level of deductible you select. Some common characteristics are:

- 1) **Your home's location.** Is your home in an earthquake-prone area? If the area where you live is likely to have earthquake activity, your premiums will be higher.
- 2) **The age of your home.** The premium can be higher for older homes.
- 3) **The construction of your home.** How large is your home and how many stories does it have? Is it a wood frame home or masonry (brick) home? Does it have a masonry (brick) veneer? Does your home have a basement or is it on a concrete slab block foundation?
- 4) **The cost to rebuild your home.** You can choose to insure your home and its contents for either *replacement cost* or *actual cash value*. Replacement cost is the cost to rebuild your home or repair damages using materials of similar kind and quality. Actual cash value is the value of your home considering its age and wear and tear. Actual cash value coverage pays you for your loss but often doesn't pay enough to fully repair or replace the property.
- 5) **The deductible(s).** As with home insurance, a larger deductible means you'll be responsible for more of the loss. It also means a lower premium for you.

HOW DO EARTHQUAKE DEDUCTIBLES AFFECT ME?

Earthquake insurance commonly is offered with a high deductible in the form of a percentage rather than a dollar value. The deductible may range from 5 to 25 percent of the structure's policy limit and is higher for locations that have a higher-than-average risk of earthquakes. The insurer is responsible for payment only for damages that exceed the deductible. Not all policies are alike, and the deductible may apply separately to the loss of contents, structure, or unattached structures.

Assume that an earthquake totally destroys your home, and you have earthquake insurance that covers all the damage from the earthquake. The following table explains, by way of example, how one type of earthquake deductible may work if there's a loss from an earthquake. Always check with your insurance agent or company for an explanation of how the deductible works for your earthquake coverage.

	Dwelling	Outside Structures	Personal Contents	Total Amount
Coverage Limits	\$100,000	\$10,000	\$50,000	\$160,000
Deductible	10%	10%	10%	
Your Property Damage	\$110,000	\$8,500	\$62,000	\$180,500
Deductible Amount (Your Responsibility)	[\$10,000] <small>(\$100,000 x 10%)</small>	[\$1,000] <small>(\$10,000 x 10%)</small>	[\$5,000] <small>(\$50,000 x 10%)</small>	\$16,000
Total Amount Insurer May Pay <i>The lesser of: (covered loss – deductible) or policy limits</i>	\$100,000	\$7,500	\$50,000	\$157,500

In the table above, the deductible is 10% for each type of coverage. You would be responsible for the deductible for the dwelling, or \$10,000 in this case. You also would be responsible for the \$1,000 deductible on outside structures and the \$5,000 deductible on personal property.

The earthquake damage to the dwelling and personal property is more than the coverage limit for both of these types of property. For example, there is \$110,000 in damages to the dwelling vs. a \$100,000 coverage limit. However, the damage to outside structures is less (\$8,500) than the \$10,000 coverage limit.

Total reimbursement to you would be based on the difference between your property damage and the deductible, up to the coverage limit. In this example, the insurer would pay \$100,000 (\$110,000-\$10,000) for the dwelling and \$7,500 (\$8,500-\$1,000) for outside structures. In each of these, the net loss was less than or equal to the coverage limit.

The insurer's payment for personal property would be calculated the same way – property damage (\$62,000) minus deductible (\$5,000). Your net loss would be \$57,000. However, your policy limit is \$50,000 for personal contents, so the total amount you would be paid for your personal property loss would be capped at the coverage limit or \$50,000.

In this example, your total loss is \$180,500. You would be responsible for \$16,000 in deductibles plus \$7,000 in unreimbursed or non-covered damage to your personal property. The insurer's total payment for this claim would be \$157,500.

When you shop for insurance, you may be asked what deductible you want. Remember that earthquake deductibles are already much larger than a typical home insurance deductible. If your deductible is too high, you may never be able to use your earthquake insurance because the damage will never be greater than the deductible.

Percentage Deductible

The deductible is the amount that **you** pay before insurance starts paying. Earthquake insurance usually comes with a *percentage deductible*. The percentage is calculated based upon the amount of Coverage A and **not** based upon to the amount of loss.

The deductible you pay is considered an uninsured loss. You're entitled to federal disaster loans to help cover uninsured losses. Remember that you are expected to repay a loan.

Another unique feature of earthquake insurance is time limits. Typically, all earthquake events in a 72-hour (3-day) period are considered one event, with one claim and one set of deductibles. Damage caused by aftershocks more than 72 hours after the first quake could mean a second claim with a second set of deductibles. The period of time may not be 72 hours in all policies. Ask your insurance agent or company.

WHAT CAN I DO TO PROTECT MYSELF AND MY HOME?

A homeowner can take steps to lower the risk of earthquake damage. Some of these steps also can mean a lower earthquake insurance premium. Retrofitting (changes to your home to reduce damage) may be an easy and inexpensive way to protect some homes. However, changes to the structure and to some types of homes could be very expensive. A qualified contractor or engineer can advise if retrofitting is practical for your home.

Some inexpensive ways to retrofit your home are:

- Bolt down items such as bookcases, dressers, and televisions. Securing heavy items not only can reduce property damage but also can mean fewer injuries.
- Secure and brace the water heater to the dwelling frame.
- Install automatic gas shut-off valves.

More expensive, structural retrofit measures are:

- Anchor a house to its foundation through seismic bolting.
- Install bracing; one approach is to cover cripple walls (in the space between the foundation and the floor where the crawl space is) with plywood.

The University of Nevada Seismological Laboratory is an excellent resource for how to prepare your home, family and workplace for a seismic event. The website also provides information on earthquakes in Nevada and the lessons learned from past earthquakes. You can access this information at: <http://www.seismo.unr.edu/Preparedness>.

The website for Earthquake Country Alliance, based in California, gives specific instructions to secure furniture and other items in your home to prevent injuries and damages at: www.earthquakecountry.org/

You'll find advice from the United States Geological Survey on preparing for an earthquake and what to do during and after one at: <https://www.usgs.gov/faqs/what-can-i-do-be-prepared-earthquake>.

Emergency experts advise you to always have basic supplies (such as water, food, and flashlights) on hand in case there's an emergency. The Federal Emergency Management Agency (www.fema.gov) and your state or local emergency services offices have more information on preparing for an emergency.

AFTER AN EARTHQUAKE

If your home, apartment or business has suffered damage from an earthquake:

- ✚ Find a radio, television, or Internet connection to learn about emergency instructions from your local officials.
- ✚ You should expect aftershocks, which can cause more damage in the hours, days, weeks or even months after the quake.
- ✚ Check utility lines and appliances for damage. If you smell gas, open the windows and turn off the main gas valve. If your home's electric power goes on and off, turn off your home's main circuit breaker to prevent power surges.
- ✚ Check chimneys for cracks or other damage before making a fire.
- ✚ If your home has been damaged, do whatever you need to prevent more damage or property loss. This could include boarding up windows to prevent theft.
- ✚ Call your agent or insurance company. Ask about your coverage for earthquake damage and what to expect next. Most importantly, ask when and how a claims adjuster will contact you. Even if you do not have earthquake insurance, file a claim with your home or commercial insurance company or agent right away. Additional living expenses or certain damages from fire and water may be covered under the standard home or commercial insurance policies.

- ✚ Keep notes about your contacts with the insurer, your agent and any other insurance company representative about your claim. Include dates, times and names. Keep copies of correspondence.
- ✚ Check your own documents to find your policy and declarations page. Both will tell you more about your coverage.
- ✚ Find your household inventory.

If an affected area is declared a federal major disaster, consumers may need written documentation of claim denials to receive certain kinds of assistance from state and federal agencies. However, in the event a claim that was originally denied is changed to an accepted claim at a later date, homeowners or business owners are generally required to reimburse the financial assistance or funding received, not to exceed their claim settlement.

SOME USEFUL TIPS

An insurance policy is a legal contract. Read your policy, and if you have questions, contact your insurance agent or company. If you still have questions, contact the Nevada Division of Insurance.

Helpful Hint

Enter your insurance agent's phone number or your insurer's toll-free phone number into your cell phone's memory.

When you buy earthquake insurance, you'll receive a policy. If you do not receive a policy within 30 days, contact the insurance company. If you need a company's toll-free number, check its website, call your agent, or contact the Nevada Division of Insurance.

Keep your policy in your home files. Know the name of your insurer.

- ✚ Before any disaster occurs, make sure to prepare a detailed inventory of your property. Take pictures and make video recordings where possible and try to save receipts of major items for documentation purposes. Having thorough written and visual records of your property in its pre-loss condition is likely to make it easier to demonstrate to your insurance company the nature and extent of the damage.
 - Go through each room; write down and take pictures or videos of everything in the room. Don't forget valuable items such as antiques, electronics, jewelry, collectibles, and guns.
 - Store your home inventory in a secure place at another location, such as your workplace, a safe deposit box, a relative's house, or online. Keep a copy at home.
 - Review and update your home inventory, including your pictures and videos, each year. Update your inventory when you buy new items and make repairs. Keep receipts with your home inventory.

- ✚ If your property has been damaged as a result of an earthquake, do whatever is necessary to prevent further damage, including boarding up your home to prevent looting.
- ✚ Obtain estimates for repairs to structural damage. Prepare an inventory of damaged personal items. Include a description of each item and its value. Attach bills, receipts, and other documentation that substantiate your figures. In addition, keep careful records of any additional living expenses you incur if you have to find other accommodations while your house is being repaired.
- ✚ Once your insurance company has determined that your loss is covered, it probably will assign an adjuster to verify your claim and determine the amount of the loss. Most claims are settled promptly, but some may require investigation, often because of the extent of the loss or because the cause of loss is unclear.
- ✚ As with all types of insurance, the best advice is to understand your policy and be sure you have the proper coverage before an accident or disaster occurs. If you need help understanding what your policy covers, contact the Division of Insurance Consumer Services Section at (775) 687-0700 in Carson City or at (702) 486-4009 in Las Vegas or toll free at (888) 872-3234.
- ✚ If you are unable to find earthquake insurance because of risk characteristics in the voluntary insurance market, you may contact a licensed surplus lines broker for placement within the non-admitted market. Licensed surplus lines brokers also have access to natural disaster policies including earthquake coverage. A list of licensed surplus lines brokers is available through the Nevada Surplus Lines Association.

WHO OFFERS EARTHQUAKE INSURANCE?

The companies provided in the list below are admitted or nonadmitted (surplus-lines) carriers that wrote at least \$10,000 of earthquake insurance premiums in 2020. The admitted carriers are licensed by the Commissioner of Insurance and are subject to the Division's regulatory oversight. Contact information for these companies is available on the Division's web site, doi.nv.gov. Click on the License Look-up Tool and enter the company name. The nonadmitted carriers are available through surplus-lines brokers and may provide specialty coverage or coverage for risks that admitted insurers will decline to cover.
